EXECUTIVE SUMMARY

Detail-oriented and results-driven B.Tech Information Technology student with proven expertise in full stack development using Java, frontend technologies , and SQL database management. Skilled at building responsive web applications, and integrating AI-powered tools to optimize user engagement, system efficiency, and scalability. Demonstrated ability to deliver end-to-end projects on time, enhance performance through backend-frontend integration, and solve complex problems in dynamic environments. Actively seeking to leverage technical skills and innovative mindset as a Java Full Stack Developer in a professional, growth-oriented tech organization.

PROJECTS

User Management System http://localhost:8081/servlet_jsp_project/login.jsp

- User Management System – Designed and developed a Java-based web application using JDBC, Servlet, and JSP to manage user registration and authentication with a structured MVC architecture
- Technologies: Implemented server-side logic using Servlets, dynamic UI using JSP, and database connectivity using JDBC with PostgreSQL for secure data handling.

Employee Management System

- Developed an Employee Management System, a web-based application designed to manage employee records efficiently. Implemented features to add, update, view, and manage employee details with secure authentication. Focused on structured MVC architecture, database integration, and smooth functionality for efficient employee data management.

EDUCATION
